### The Cambridge Companion to Darwin

Beginning with the words, "One of the gifts we have received from the twentieth century is a picture of Earth as our shared home," Denis Edwards helps the general reader, the preacher, the spiritual director, the student and the theologian tear down the walls that too often separate mysticism, theology, prophecy, poetry, and science.

In a world born of the "big bang," Edwards shows that humanity and the world are together being made into the image of God. The heart of faith is an ecological communion holds together and grows in love toward the fullness of life imaged in the Resurrection of Jesus.

### Darwin's Unfinished Symphony

Interested in the origins of the species? Consider the Platypus uses pets such as dogs and cats as well as animal outliers like the axolotl and naked mole rat to wittily tackle mind-bending concepts about how evolution, biology, and genetics work. Consider the Platypus explores the history and features of more than 50 animals to provide insight into our current understanding of evolution. Using Darwin's theory as a springboard, Maggie Ryan Sandford details scientists' initial understanding of the development of creatures and how that has expanded in the wake of genetic sequencing, including the: Peppered Moth, which changed color based on the amount of soot in the London air; California Two-Spotted Octopus, which has the amazing ability to alter its DNA/RNA not over generations but during its lifetime; miniscule tardigrade, which is so hearty it can withstand radiation, lack of water and oxygen, and temperatures as low as -328 ° F and as high 304 ° F; and, of course, the platypus, which has so many disparate features, from a duck's bill to venomous spur to mammary patches, that scientists originally thought it was a hoax. Surprising, witty, and impeccably researched, Sandford describes each animal's significant features and how these have adapted to its environment, such as the zebra finch's beak shape, which was observed by Charles Darwin and is a cornerstone of his Theory of Evolution. With scientifically accurate but charming art by Rodica Prato, Consider the Platypus showcases species as diverse as the sloth, honey bee, cow, brown kiwi, and lungfish, to name a few, to tackle intimidating concepts in an accessible way.

### Darwin Comes to Town

Here is comprehensive coverage of the rapidly growing field of eco-theology. Eco-Theology evaluates the merits or otherwise of contemporary eco-theologies and introduces readers to critical debates, while tracing trends from around the globe and key theological responses. The emphasis is on the theological aspects of

Christian engagement with environmental issues, rather than primarily ethical or spiritual concerns. Included are further reading sections and discussion questions.

### Being a Beast

An examination of the relationship between faith in God and the concept of ecological care within a crisis of biodiversity

### The Strength of Her Witness

### Ask the Beasts: Darwin and the God of Love

This volume takes the reader on a journey from New Testament and early church views of incarnation to contemporary understandings of Christology. A prominent group of scholars explores and debates the idea of “ deep incarnation ” —the view that the divine incarnation in Jesus presupposes a radical embodiment that reaches into the roots of material and biological existence, as well as into the darker sides of creation. Such a wide-scope view of incarnation allows Christology to be meaningful when responding to the challenges of scientific cosmology and global religious pluralism.

### Consider the Platypus

With a voice at once prophetic, poetic, and scholarly, Johnson shows how the traditional understanding of God as male can make room for the feminine God, and how the experience of women everywhere enriches our view of God and our spiritual lives.

### The Evolution of Beauty

### Environmental Ethics, Ecological Theology, and Natural Selection

Joseph A. Bracken argues that the failure of theology and science to generate cohesion is the lack of an integrated system of interpretation of the Christian faith that consciously accords with the insights and discoveries of contemporary science. Bracken utilizes the language and conceptual structures of systems theory as a philosophical and scientific grammar to show traditional Christian beliefs in a new light that is accessible and rationally plausible to a contemporary, scientifically influenced society.

### A Watered Garden

A FINALIST FOR THE PULITZER PRIZE NAMED A BEST BOOK OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW, SMITHSONIAN, AND WALL STREET JOURNAL A major reimagining of how evolutionary forces work, revealing how mating preferences—what Darwin termed “the taste for the beautiful”—create the extraordinary range of ornament in the animal world. In the great halls of science, dogma holds that Darwin’s theory of natural selection explains every branch on the tree of life: which species thrive, which wither away to extinction, and what features each evolves. But can adaptation by natural selection really account for everything we see in nature? Yale University ornithologist Richard Prum—reviving Darwin’s own views—thinks not. Deep in tropical jungles around the world are birds with a dizzying array of appearances and mating displays: Club-winged Manakins who sing with their wings, Great Argus Pheasants who dazzle prospective mates with a four-foot-wide cone of feathers covered in golden 3D

spheres, Red-capped Manakins who moonwalk. In thirty years of fieldwork, Prum has seen numerous display traits that seem disconnected from, if not outright contrary to, selection for individual survival. To explain this, he dusts off Darwin's long-neglected theory of sexual selection in which the act of choosing a mate for purely aesthetic reasons—for the mere pleasure of it—is an independent engine of evolutionary change. Mate choice can drive ornamental traits from the constraints of adaptive evolution, allowing them to grow ever more elaborate. It also sets the stakes for sexual conflict, in which the sexual autonomy of the female evolves in response to male sexual control. Most crucially, this framework provides important insights into the evolution of human sexuality, particularly the ways in which female preferences have changed male bodies, and even maleness itself, through evolutionary time. *The Evolution of Beauty* presents a unique scientific vision for how nature's splendor contributes to a more complete understanding of evolution and of ourselves.

### Why Evolution is True

Chapter I Porto Praya—Ribeira Grande—Atmospheric Dust with Infusoria—Habits of a Sea-slug and Cuttle-fish—St. Paul's Rocks, non-volcanic—Singular Incrustations—Insects the first Colonists of Islands—Fernando Noronha—Bahia—Burnished Rocks—Habits of a Diodon—Pelagic Confervæ and Infusoria—Causes of discoloured Sea. ST. JAGO—CAPE DE VERD ISLANDS After having been twice driven back by heavy south-western gales, Her Majesty's ship *Beagle*, a ten-gun brig, under the command of Captain Fitz Roy, R.N., sailed from Devonport on the 27th of December, 1831. The object of the expedition was to complete the survey of Patagonia and Tierra del Fuego, commenced under Captain King in 1826 to 1830--to survey the shores of Chile, Peru, and of some islands in the Pacific--and to carry a chain of chronometrical measurements round the World. On the 6th of January we reached Teneriffe, but were prevented landing, by fears of our bringing the cholera: the next morning we saw the sun rise behind the rugged outline of the Grand Canary Island, and suddenly illumine the Peak of Teneriffe, whilst the lower parts were veiled in fleecy clouds. This was the first of many delightful days never to be forgotten. On the 16th of January 1832 we anchored at Porto Praya, in St. Jago, the chief island of the Cape de Verd archipelago.

### Truly Our Sister

The author offers an interpretation of Mary that is theologically sound, spiritually empowering, ethically challenging, socially liberating, and ecumenically fruitful. She construes the image of Mary so as to be a source of blessing rather than blight for women's lives in both religious and political terms.

### Ecology at the Heart of Faith

This volume provides the reader with clear, lively and balanced introductions to the most recent scholarship on Darwin and his intellectual legacies.

### A Naturalist's Voyage Round the World

\*Carrion crows in the Japanese city of Sendai have learned to use passing traffic to crack nuts. \*Lizards in Puerto Rico are evolving feet that better grip surfaces like concrete. \*Europe 's urban blackbirds sing at a higher pitch than their rural cousins, to be heard over the din of traffic. How is this happening? Menno Schilthuizen is one of a growing number of "urban ecologists" studying how our manmade environments are accelerating and changing the evolution of the animals and plants around us. In *Darwin Comes to Town*, he takes us around the world for an up-close look at just how stunningly flexible and swift-moving natural selection can be. With human populations growing, we 're having an increasing impact on global ecosystems, and nowhere do these impacts overlap as much as they do in cities. The urban environment is

about as extreme as it gets, and the wild animals and plants that live side-by-side with us need to adapt to a whole suite of challenging conditions: they must manage in the city ' s hotter climate (the " urban heat island " ); they need to be able to live either in the semidesert of the tall, rocky, and cavernous structures we call buildings or in the pocket-like oases of city parks (which pose their own dangers, including smog and free-ranging dogs and cats); traffic causes continuous noise, a mist of fine dust particles, and barriers to movement for any animal that cannot fly or burrow; food sources are mainly human-derived. And yet, as Schilthuizen shows, the wildlife sharing these spaces with us is not just surviving, but evolving ways of thriving. *Darwin Comes to Town* draws on eye-popping examples of adaptation to share a stunning vision of urban evolution in which humans and wildlife co-exist in a unique harmony. It reveals that evolution can happen far more rapidly than Darwin dreamed, while providing a glimmer of hope that our race toward over population might not take the rest of nature down with us.

### She who is

This book serves as an introduction to the burgeoning field of ecotechnology, illustrating both its variety and its commonality across different Christian theological divides. Some of the questions addressed in this short book include the following: How can the Bible still make sense in the context of climate change and biodiversity loss? Who on earth is Jesus Christ, and what does he mean for us in today's world? How can Christians be faithful to their traditions while responding to pressing calls to be engaged in environmental activism? What is the relationship between theory and practice, and local as well as global demands, and how is this relationship expressed in different ecclesial settings? How can we encourage each other to develop a sense of the earth as divine gift? Written in clear, accessible style, this book walks readers through difficult concepts and shows the way different sources in Christian theology have responded to one of the most significant cultural issues of our time.

### Gorgeous Beasts

'Since the middle of the twentieth century,' writes Elizabeth Johnson, 'there has been a renaissance of new insights into God in the Christian tradition. On different continents, under pressure from historical events and social conditions, people of faith have glimpsed the living God in fresh ways. It is not that a wholly different God is discovered from the One believed in by previous generations. Christian faith does not believe in a new God but, finding itself in new situations, seeks the presence of God there. Aspects long-forgotten are brought into new relationships with current events, and the depths of divine compassion are appreciated in ways not previously imagined.' This book sets out the fruit of these discoveries. The first chapter describes Johnson's point of departure and the rules of engagement, with each succeeding chapter distilling a discrete idea of God. Featured are transcendental, political, liberation, feminist, black, Hispanic, interreligious, and ecological theologies, ending with the particular Christian idea of the one God as Trinity.

### I Can Do No Other

Elizabeth Johnson is widely regarded as among the most influential and creative Catholic theologians in the world--particularly for her contributions in bringing a feminist perspective to the central themes of Christian faith. Among her books are path-breaking works on God, Jesus, the church, Mary, and the communion of saints. In many cases she has also treated these themes in essays and lectures addressed to the wider "people of God." This volume is the first collection of these writings. It offers an overview of her essential work, but at the same time, given the range of her concerns, a brilliantly fresh exploration of the Christian faith.

### God, Evolution, and Animal Suffering

To test the limits of our ability to inhabit lives that are not our own, Charles Foster set out to know the ultimate other: the nonhumans. To do that, he chose five animals and lived alongside them, sleeping as they slept, eating what they ate, learning to sense the landscape through the senses they used. In this lyrical, intimate, and completely radical look at the lives of animals, Charles Foster mingles neuroscience and psychology, nature writing and memoir, and ultimately presents an inquiry into the human experience in our world, carried out by exploring the full range of the life around us.

### A Black Political Theology

This collection introduces and explores "watershed discipleship" as a critical, contextual, and constructive approach to ecological theology and practice, and features emerging voices from a generation that has grown up under the shadow of climate catastrophe. *Watershed Discipleship* is a "triple entendre" that recognizes we are in a watershed historical moment of crisis, focuses on our intrinsically bioregional locus as followers of Jesus, and urges us to become disciples of our watersheds. Bibliographic framing essays by Myers trace his journey into a bioregionalist Christian faith and practice and offer reflections on incarnational theology, hermeneutics, and ecclesiology. The essays feature more than a dozen activists, educators, and practitioners under the age of forty, whose work and witness attest to a growing movement of resistance and reimagination across North America. This anthology overviews the bioregional paradigm and its theological and political significance for local sustainability, restorative justice, and spiritual renewal. Contributors reread both biblical texts and churchly practices (such as mission, baptism, and liturgy) through the lens of "re-place-ment." Herein is a comprehensive and engaged call for a "Transition church" that can help turn our history around toward environmental resiliency and social justice, by passionate advocates on the front lines of watershed discipleship. CONTRIBUTORS: Sasha Adkins, Jay Beck, Tevyn East, Erinn Fahey, Katarina Friesen, Matt Humphrey, Vickie Machado, Jonathan McRay, Sarah Nolan, Reyna Ortega, Dave Pritchett, Erynn Smith, Sarah Thompson, Lydia Wylie-Kellermann

### Science and Faith

From the vantage point of eighty years, a highly regarded scientist and theologian surveys the full spectrum of critical issues between science and theology. John Polkinghorne, an international figure known both for his contributions to the field of theoretical elementary particle physics and for his work as a theologian, has over the years filled a bookshelf with writings devoted to specific topics in science and religion. In this new book, he undertakes for the first time a survey of all the major issues at the intersection of science and religion, concentrating on what he considers the essential insights for each. Clearly and without assuming prior knowledge, he addresses causality, cosmology, evolution, consciousness, natural theology, divine providence, revelation, and scripture. Each chapter also provides references to his other books in which more detailed treatments of specific issues can be found. For those who are new to what Polkinghorne calls "one of the most significant interdisciplinary interactions of our time," this volume serves as an excellent introduction. For readers already familiar with John Polkinghorne's books, this latest is a welcome reminder of the breadth of his thought and the subtlety of his approach in the quest for truthful understanding.

### Beyond the Firmament

How does Christianity change the way we view the natural world? In this addition to a critically acclaimed series, renowned theologian Norman Wirzba engages philosophers, environmentalists, and cultural critics to show how the modern concept of nature has been deeply problematic. He explains that understanding the world as creation rather than as nature or the environment makes possible an imagination shaped by practices of responsibility and gratitude, which can help bring healing to our lands and communities. By learning to give thanks for creation as God's gift of life, Christians bear witness to the divine love that is

reconciling all things to God. Named a "Best Theology Book of 2015," Englewood Review of Books "Best Example of Theology in Conversation with Urgent Contemporary Concerns" for 2015, Hearts & Minds Bookstore

### Evocations of Grace

What is the Christian response to developments in the hard sciences? What do discoveries at the macro and micro levels have to say about Christian theology, about a theology of God, Christology, pneumatology, and creation? How do the developments in systematic theology that do take the advances in cosmology and the New Sciences seriously come to bear on our worship life? These are the questions that are addressed in this text. It is an initial effort to bring cosmology and the New Sciences into dialogue with developments in systematic and sacramental theology. This book also suggests some ways in which these developments might appear in our worship. Overall, the author is concerned to reduce the cognitive dissonance between our scientifically informed everyday lives and our life of faith.

### Creation and the Cross

### Ask the Beasts of the Southern Wild

Originally published: Philadelphia: Westminster Press, 1974.

### What Would Animals Say If We Asked the Right Questions?

As debates within the Church over the scientific details of creation become more frequent, the experts seem to grow more entrenched while the rest of us only become more confused. Somewhere between the endless arguments over distant starlight and Carbon-14 dating, calculating the mathematical improbabilities of things that already exist, and parsing ancient Hebrew and Greek, somebody needs to ask the simple question, If 3,500 years of scientific progress can't help modern Christians figure out Genesis, then how could the ancient Israelites possibly have understood it so well? What secret did this newly liberated gaggle of Hebrew nomads take with them out of Egypt that holds the key to understanding God's telling of His own creation story? Beyond the Firmament challenges all creationist camps --whether Young-Earth, Old-Earth, or Theistic Evolutionist -- to step outside of traditional paradigms and recognize how our modern, Western, post-Enlightenment scientific worldview actually blinds us from seeing the simple truth of Creation as it was originally intended, and how our failure to grasp the theological significance of the Biblical creation model puts science and faith on a collision course.

### Elizabeth Johnson

“ You are about to enter a new genre, that of scientific fables, by which I don ’ t mean science fiction, or false stories about science, but, on the contrary, true ways of understanding how difficult it is to figure out what animals are up to. ” —Bruno Latour, from the Foreword *Is it all right to urinate in front of animals? What does it mean when a monkey throws its feces at you? Do apes really know how to ape? Do animals form same-sex relations? Are they the new celebrities of the twenty-first century? This book poses twenty-six such questions that stretch our preconceived ideas about what animals do, what they think about, and what they want. In a delightful abecedarium of twenty-six chapters, Vinciane Despret argues that behaviors we identify as separating humans from animals do not actually properly belong to humans. She does so by exploring incredible and often funny adventures about animals and their involvements with researchers, farmers, zookeepers, handlers, and other human beings. Do animals have a sense of humor? In reading these*

stories it is evident that they do seem to take perverse pleasure in creating scenarios that unsettle even the greatest of experts, who in turn devise newer and riskier hypotheses that invariably lead them to conclude that animals are not nearly as dumb as previously thought. These deftly translated accounts oblige us, along the way, to engage in both ethology and philosophy. Combining serious scholarship with humor that will resonate with anyone, this book—with a foreword by noted French philosopher, anthropologist, and sociologist of science Bruno Latour—is a must not only for specialists but also for general readers, including dog owners, who will never look at their canine companions the same way again.

### A Primer in Ecotheology

Who is God? That is the question Elizabeth A. Johnson has spent her life exploring. As a Catholic theologian, writer, teacher, and religious woman, Johnson has searched for “ the Living God ” and ways to understand God that make sense for our time, perhaps most famously in her groundbreaking book *She Who Is*. Her work is firmly grounded in the Catholic tradition while it explores the edges of that tradition, pushing it to be more inclusive—a project that has caught the attention of other scholars, everyday Catholics, and sometimes critics. Johnson ’ s own relationship with God as Holy Mystery has helped her to navigate her life ’ s challenges, including finding herself thrust into the spotlight as a headline-making symbol of religious women facing challenges from the church leadership. With this first biography of one of the preeminent Catholic theologians of our time, those who have been enriched by Johnson ’ s work will now find themselves inspired by her remarkable life story.

### Incarnation

For all the discussion in the media about creationism and 'Intelligent Design', virtually nothing has been said about the evidence in question - the evidence for evolution by natural selection. Yet, as this succinct and important book shows, that evidence is vast, varied, and magnificent, and drawn from many disparate fields of science. The very latest research is uncovering a stream of evidence revealing evolution in action - from the actual observation of a species splitting into two, to new fossil discoveries, to the deciphering of the evidence stored in our genome. *Why Evolution is True* weaves together the many threads of modern work in genetics, palaeontology, geology, molecular biology, anatomy, and development to demonstrate the 'indelible stamp' of the processes first proposed by Darwin. It is a crisp, lucid, and accessible statement that will leave no one with an open mind in any doubt about the truth of evolution.

### From Nature to Creation (The Church and Postmodern Culture)

Humans possess an extraordinary capacity for culture, from the arts and language to science and technology. But how did the human mind—and the uniquely human ability to devise and transmit culture—evolve from its roots in animal behavior? Darwin ’ s *Unfinished Symphony* presents a captivating new theory of human cognitive evolution. This compelling and accessible book reveals how culture is not just the magnificent end product of an evolutionary process that produced a species unlike all others—it is also the key driving force behind that process. Kevin Laland tells the story of the painstaking fieldwork, the key experiments, the false leads, and the stunning scientific breakthroughs that led to this new understanding of how culture transformed human evolution. It is the story of how Darwin ’ s intellectual descendants picked up where he left off and took up the challenge of providing a scientific account of the evolution of the human mind.

### Abounding in Kindness

In this account of early mammals and their evolution, a naturalist presents fossil discoveries such as towering mammoths, tiny horses, and whales with legs, among other exotic extinct species, providing a perspective on

the grandeur of evolution.

## Making Sense of Evolution

The most important writings on the subject of Christian ecology are collected here, with essays on stewardship, ethics, and Christian ecological theology. Original.

## Elizabeth A. Johnson, Ask the Beasts: Darwin and the God of Love

Lisa Sideris proposes a new way of thinking about the natural world, an environmental ethic that incorporates the ideas of natural selection and values the processes rather than the products of nature. Such an approach encourages us to take a minimally interventionist approach to nature. Only when the competitive realities of evolution are faced squarely, Sideris argues, can we generate practical environmental principles to deal with such issues as species extinction and the relationship between suffering and sentience.

## Worship and the New Cosmology

Lays out three distinct ways of responding to the main theological concerns and religious difficulties raised by the natural sciences today: conflict, contrast, and convergence.

## The World in the Trinity

Haught offers a provocative take on how reconciliation between evolution and Christian theology might begin, and questions whether the two concepts must be mutually exclusive.

## Watershed Discipleship

## Eco-Theology

After the publication of *On the Origin of Species* in 1859, theologians were faced with the dilemma of God creating through evolution. Suddenly, pain, suffering, untimely death and extinction appeared to be the very tools of creation, and not a result of the sin of humanity. Despite this paradigm shift, the question of non-human suffering has been largely overlooked within theodicy debates, overwhelmed by the extreme human suffering of the twentieth century. This book redresses this imbalance by offering a rigorous academic treatment of the questions surrounding God and the suffering of non-human animals. Combining theological, philosophical, and biblical perspectives, this book explores the relationship between God and Creation within Christian theology. First it dismantles the popular theological view that roots violence and suffering in the animal kingdom in the fall of humanity. Then, through an exploration of the nature of love, it affirms that there are multiple reasons to suggest that God and creation can both be "good", even with the presence of violence and suffering. This is an innovative exploration of an under-examined subject that encompasses issues of theology, science, morality and human-animal interactions. As such, it will be of keen interest to scholars and academics of religion and science, the philosophy of religion, theodicy, and biblical studies.

## Quest for the Living God

Easy, do-able, down to earth ideas and suggestions for everyone to help save the planet. If you want to save the planet, but your to-do list is already pretty long and remembering your re-usable coffee cup feels like a

Herculean task, then this is the book for you. Covering every aspect of our lives from the stuff we buy and the food we eat, to how we travel, work, and celebrate. This book provides stacks of practical, down to earth ideas to slot into your daily life, alongside a gentle kick up the butt to put your newfound knowledge into action. Practical tips include unsubscribing from all the tempting emails that drop into your inbox with details of the newest clothing range or the latest sale, and keeping a mug next to your kettle to work out how much water you actually need to boil each time, as over filling kettles costs British households £ 68 million on energy bills each year. Find out how to fit "sustainable living" into your life, in a way that works for you. Change your impact without radically changing your life and figure out the small steps you can make that will add up to make a big difference (halo not included).

### Beasts of Eden

This book begins with the classic, ecumenically held patterns of Christian worship and explores them for their deep connections to ecological wisdom, for their sacramental approaches to creation, and for a renewed relationship to the earth now itself in need of God ' s healing. The Worship Matters Studies Series examines key worship issues through studies by pastors, musicians, and laypeople from throughout the Evangelical Lutheran Church in America. Features include the following: 1) Informal and insightful writing for all readers; 2) Study questions at the end of every chapter; 3) Examination of vital issues in weekly worship; and 4) Increased ability of leaders and congregants to understand and experience worship more richly.

### The Sustainable(ish) Living Guide

Author Anna M. Madsen's book is a fresh and challenging look at the legacy of Martin Luther and the new reformation that is calling people of faith to action today. This book is born out of the conviction that at least two gods are currently competing for our collective trust: nationalism (and its many sub-manifestations) and quietism. Both make a case for and a claim on our allegiance, each by way of different motivations of self and institutional protection. Madsen looks at today's modern context and asks: Where will the church stand in a day that is marked by globalization, polarization, racism, bigotry, and debates about justice for humanity and for the earth itself. While the Reformation church was built on the foundation of justification by grace, Madsen calls people of faith to a new reformation that will focus on standing for justice in the world. Madsen delves into who Jesus was, and how our claim that he died and was raised establishes our faith and impacts the way we live it out. She pays attention to Luther's theology and juxtaposes it with our present context. She explores recent examples of Nazi resistance, liberation theology, black and womanist theology, and feminist theology, each of which come at social justice in their unique ways, with a common conviction that justice work is central to the Christian life. She speaks of how our faith grounding and our faith history weave together and entwine themselves into our present moment, offering both warnings and encouragement. And last, a case is made that justice, anchored in justification, is our new Reformation moment, one not inconsistent with Luther's theology, but weighted differently to address the different weighty concerns of our day. A study guide is included to encourage group conversation and action.
