In the eleventh hour, future and past worlds collide through time travel. It's 2040. A business empire, PTB, dominates the world, controlling energy, communications and most politicians. Now it seeks a monopoly over all water and food. Howard Wheaton, the mastermind who has developed quantum computers, and his wife, Lady Margaret, are powerful enough to operate outside their control. Made wealthy by his own computer empire, Wheaton also owns time travel technology which he fights to keep out of the hands of PTB. Using time travel, Wheaton sends people into the past, but a team goes only one time into the future. Because of what they find, the future is kept secret as the Wheatons develop plans—the most important, a clandestine project to begin in 1872 Paris. Erik Mercier—whose infamous legend shadowed him in life and death—is chosen to front Wheaton's project to be carried out in the past. Known to be a creative genius who lived in the underworld of Paris, he was also said to be a cursed madman. Some called him a murderer. Even a phantom. But what is the real reason he was chosen? Events spin out of control when Mercier is rescued from execution and transported to 2040, only to become the center of a power play. PTB pulls strings for Mercier to be put on trial for murders based on the rumors and myths that surrounded him. In a Seattle office, attorney Kathryn Copeland is confronted by Mercier, a defiant, mercurial man, scarred in body and soul. Not only conflicted about defending him, she is also deeply suspicious about the Wheatons. What are their true motives? As she attempts to separate the truth about Mercier from the legend, Kathryn struggles to avoid becoming entrapped in a web of desperate schemes. Entwined with Mercier's fate is the fate of mankind. And time is running out—in the shadow of our own impending phantom future. (To read the first chapters of Phantom Future, go to lmbanyan.com)

Patterns in data are often used as evidence, but how can you tell if that evidence is worth believing? The Phantom Pattern Problem helps readers avoid being duped by data, tricked into worthless investing strategies, or scared out of getting vaccinations. Becoming a sceptical consumer of data is important in this age of Big Data.
