Molecular Expressions Cell Biology: Animal Cell Structure

Trends in Neurosciences publishes commissioned, peer-reviewed articles across all disciplines of neuroscience.

Molecular Biology of the Cell, 5th Edition: Bruce Alberts

On the cover: In this issue of Molecular Cell, Richards and Belasco (pp. 127 – 138) report that ligand-induced pseudoknot formation by the aptamer domain of a riboswitch can obstruct 5'-to-3' scanning of monophosphorylated mRNA by the regulatory endonuclease RNase E, thereby increasing gene expression by blocking access to distal cleavage sites en masse.

Cell cycle checkpoint - Wikipedia

And for the first time, Molecular Biology of the Cell now contains end-of-chapter questions. These problems, written by John Wilson and Tim Hunt, emphasize a quantitative approach and the art of reasoning from experiments, and they will help students review and extend their knowledge derived from reading the textbook.

Issue: Molecular Cell

6. Dimension 3 DISCIPLINARY CORE IDEAS—LIFE SCIENCES. The life sciences focus on patterns, processes, and relationships of living organisms. Life is self-contained, self-sustaining, self-replicating, and evolving, operating according to laws of the physical world, as well as genetic programming.

Bing: The Cell A Molecular Approach

The problems book accompanying MBoC (Molecular Biology of the Cell, A Problems Approach by John Wilson and Tim Hunt) is a jewel. It is reminiscent of the “problems approach” books by Leroy Hood and colleagues of 20 years ago (indeed Prof. Wilson was an author of at least two of those books).

Cell Press: Trends in Neurosciences

Using this approach, cell biologists have been able to assign various functions to specific locations within the cell. However, the era of fluorescent proteins has brought microscopy to the forefront of biology by enabling scientists to target living cells with highly localized probes for studies that don't interfere with the delicate balance

Molecular biology of the cell, 5th edition by B. Alberts

Cell cycle checkpoints are control mechanisms in the eukaryotic cell cycle which ensure its proper progression. Each checkpoint serves as a potential termination point along the cell cycle, during which the conditions of the cell are assessed, with progression through the various phases of the cell cycle occurring only when favorable conditions are met.

The Cell A Molecular Approach

Molecular targeted therapy for cancer has been a research hotspot for decades. AXL is a member of the TAM family with the high-affinity ligand growth arrest-specific protein 6

(GAS6). The Gas6/AXL signalling pathway is associated with tumour cell growth, metastasis, invasion, epithelial-mesenchymal transition (EMT), angiogenesis, drug resistance, immune regulation and stem cell maintenance.

Molecular biology of the cell (4th ed.): Alberts, B

LISTEN NOW. Richard Marais (Cancer Research UK Manchester Institute, UK) finds that circulating cell-free DNA is a surrogate marker of tumour burden in patients with metastatic melanoma. He tells Helen Saul that a simple blood test could predict overall survival.. Plasma total cell-free DNA (cfDNA) is a surrogate biomarker for tumour burden and a prognostic biomarker for survival in metastatic

Cancer

Edition Five of MBoC continues the line of quality initiated by Edition One. It presents an almost encyclopedic approach to up to date coverage of cell biology and in doing so just happens to also provide reasonably complete coverage of biochemistry and molecular biology. It reflects the concept that modern biology is all molecular.
